

Press Release

Monday, August 26th 2018

Vault Security Systems is proud to announce its new advisory board, that has been carefully selected to secure the highest possible chance of receiving a worldwide patent for identifying, locating and recovering lost or stolen items through blockchain technology. The appointments also demonstrate an emphasis on building a strong brand image for the company as it enters the market.

Vault Security Systems LLC is the world's first global network to use blockchain technology for registering and identifying assets (such as lost items or stolen property). The network – which is open to everyone – lets users register their items on the blockchain, plus search for and identify items. These registered assets can be almost anything of value to the owner. The advisory board consists of two highly respected **patent lawyers, Mr. William L. Samuels and Jason Le Berteaux**, located at the renowned law office Scarcini and Hollenbeck, in Park Avenue, New York City. “The patent pending process was submitted on June 22 this year and all the preparation for the completion of the patent are our highest priority,” says Arman Sarhaddar, CEO of Vault Security Systems. “Our lawyers have extensive knowledge of both the patent process and the IT business and we are confident we will secure the patent rights worldwide, once our patent is granted in the US.”

The other new addition to the board is reputable **creative director and brand manager, Remy van Donk**. Remy has created robust and effective brand strategies for several multi-billion dollar companies including Coca Cola, Vistaprint, Red Bull, Henkel, Bank Austria and Ernst & Young.
